- ◆ Title : “Environmental Implications of Genetically Modified Plants - Some Considerations for Policy Making”
- ◆ Speaker : Joerg E.U. Schmidt UNU-IAS Postdoctoral Fellow, Biodiplomacy Initiative/Science Policy for Sustainable Development
- ◆ Abstract :

The use of Genetically Modified Plants (GMPs) is met with large expectations and deep concerns from various stakeholders. With an international agreement – the Cartagena Protocol on Biosafety – and national regulations in place, there is still considerable debate in both the science and the regulatory community on how to deal with various crucial issues.

This seminar will focus on some important environmental implications associated with the use of different types of GMPs and how they are being discussed. Some additional aspects, which should be considered when it comes to assessing and managing potential environmental risks or formulating GMP-related guidelines and policies, will be outlined.
